Prebit high-power interior led lighting combines energy-saving leds with a modern design. Mark our words: you will definitely find the lighting that meets your needs!
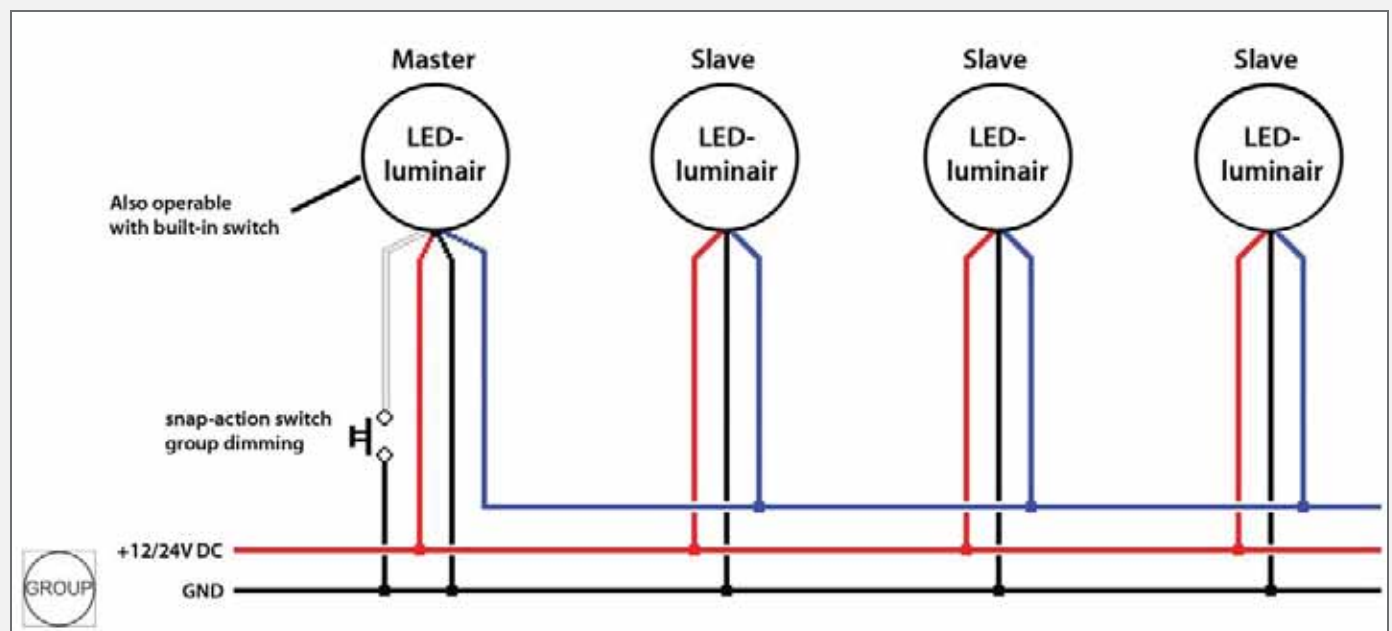

High-power led

High-power led means a high output of light, but low electricity consumption and little heat development. The leds have a guaranteed long lifetime of approximately 50,000 burning hours. For this number of burning hours you would need 50 light bulbs or 12 halogens. Prebit led lighting is suitable for a multivolt power source of 12 till 30 V DC. This makes this lighting suitable for almost every vessel.

Lighting Groups and group dimming

If multiple luminaires are in one space, it's often desirable to switch several lights on or off simultaneously or to dim one group at once. With Prebit lighting this is very simple, which is unique. The so-called "Master and Slave" system builds a lighting group quickly and easily. The master luminair is the leader of the group, through this fixture you can turn a group on or off, or dim the lights of the group. The Slave luminaires follow the Master and are therefore not independently operable. Both master and slave luminaires can also be mounted as "stand alone". For Slave luminaires you always need an external switch then. The master can be used without external switch. If you want to turn on (or off) the Master at two locations, you have to mount an external switch with the Master.

The following wiring diagram shows you how to apply Prebit lighting in a group. Because the schedule is so intelligent and simple, this system saves a lot of installation time. It is also possible to control the group dimming with the Masterbus system. For more information ask our Parts sales team.

Prebit Ceiling light

Series D1

These lamps have a satin acrylic construction, making the space comfortable illuminated. Available in three types. Type D1-1 (slave) has no dimmer; with both types D1-2 (master) and D1-3 the light can be steplessly dimmed. Through the master-slave system, you can use the D1-2 (Master) to dim several D1-1 (slaves). With type D1-3 you can switch between red light and warm white light. Red light is ideal during the night. Maps and instruments are well readable, but you also have a clear view outside.

Dimensions:

Prebit   Flexible light

Type 01
This reading light has a flexible arm which can be bend in any position. The beam angle is 25°. This means the light is gathered, so you can still read on a larger distance. The warm white light makes reading a pleasure, because the light doesn't shine brightly in your eyes, nor reflects on your map or book pages. The dimmer is controlled by a soft-touch switch on the support.

Dimensions:
Support Ø x h   : 55 x 20 mm
Length flexible arm   : 300 mm
Lampshade Ø x l   : 28 x 42 mm
Brightness   : 140 Lumens

Prebit   (Map)reading light

Type 05 and F5
This light is ideal for (map)reading. Type 05 has a flexible arm which can be bowed in any position. Type 05 has a fixed light that can turn 350° and swivel 90°. The warm white light makes reading a pleasure, because the light doesn't shine brightly in your eyes, nor reflects on your map or book pages. You can also switch to red light. Each seperate colour can be dimmed steplessly. The dimmer is controlled by a soft-touch switch on the support.

Dimensions:
Support Ø x h   : 55 x 20 mm
Length flexible arm   : 300 mm (type 05)
Lampshade Ø x l   : 60 x 21.5 mm
Brightness   : 225 Lumens

Jabsco Searchlights

Type SL

These Jabsco searchlights come complete with remote controls. Tough, weatherproof and corrosion resistant design. They are available in five types. Sealed beam halogen bulb. The 146 SL, 155 SL, 233 SL and 255 SL can move in two speeds, for easier searching the water surface. Supplied complete with watertight remote control for both horizontal and vertical movement by single joystick control and 2.5 m harness.
For your convenience, a second control panel complete with connections can be supplied as well.

Searchlight type 233 SL is a new model with some new features. This modern light has a Spot/Flood feature, to change the beam configuration steplessly from a spot to a flood. Another unique feature is the Auto Sweep. This means the light will continuously sweep ten degrees each side of the initial target spot. This powerful dual beam searchlight comes with a more advanced control compared to the other SL types.

Jabsco Searchlights

Type RC

Jabsco's chromed or brass remote controlled searchlights are available in four models. All are with a sealed beam halogen bulb, only two models RC 150 are fitted with a Xenon HID (High Intensity Discharge) bulb. With the 12V-version of the RC 130 and RC 180 you can change the beam's width by the control panel. Variable speed remote control for both horizontal and vertical movement for fast search and precise targeting, by single joystick control. The searchlights are supplied with panel and 2.5 m harness (the RC 150 includes 4.5 m harness).
Of course we can supply you with longer cables and extra controls when desired.

Type	W x l x h (mm)	Weight (kg)	Volt	Watt	Ampere	Candle power	Horizontal movement	Vertical movement	Cat. no.

Underwater lighting

Lumishore is a manufacturer of LED lighting. Their engineers are true specialists in developing lighting with high-quality leddrivers and Hicob Philips LEDs. This guarantees a high light quality, brightness and longevity. Lumishore gives better light than HID and normal LED underwater lights. They use widely angle lenses that provide a deep, wide and even spread of light. This allows you to achieve the same or a better effect with less lights. Lumishore underwater lighting features a soft start. Moreover they are simple and compact to mount because of the the small hole diameter. The Lumishore lighting is available in single or multi-colour change performance. Also, external control via DMX signal is possible.
Lumishore Thru Hull underwater lights are Lloyds approved for EMC / EMI.

Lumishore   E-lite surfacemount Amphibious

Lumishore Underwater lighting for yachts up to 18 meters. The lighting has an output of 800 - 2300 fixture lumens, works above and below water and features ATRB Active thermal roll-back. Suitable for 9-31V with a constant light output. The SM100 is equipped with warning system for low battery voltage and polarity protection. The housing is made of corrosion-resistant polymer AOM.

Cable entry diameter   : 11 mm
Lens angle   : 60° (SM100-90°)
Protection class   : IP68

Lumishore Thru Hull

Lumishores Thru Hull under water lighting is to be mounted through the hull. The light is made of Aluminium Brass. The lens has an angle of 55 degrees and is made of toughened borosilicate. Thru Hull lights are suitable for any type of vessel. Available in red, green, blue and white light. The lights are all CE approved.

Thru hull hole   : 25 mm
Voltage   : multivolt (10-31V)
Protection class   : IP68

Lumishore Thru Hull Colour change

The Lumishore Thru Hull Colour Change allows you to completely alter the RGB colours to your taste. It offers six preset colour modes as wel, red, green, blue, magenta, cyan and white. You can have the colours change in a program as short as 30 seconds or as long as 60 minutes and everything between. The controller even features a fish attractor mode. In this mode you can adjust the frequency of the strobe or set it to random strobe, which makes the lights flash in green or blue. The Thru Hull Colour Changes comes in sets with two or four units with one controller. The controller unit is made of stainless steel 316. The light is available in both 72 and 120 Watts. The X-72 sets are used for vessels from 7 up to 23 m. For bigger yachts we recommend the use of one of the X-120 sets. The Thru Hull Colour Change is DMX ready, which allows for controlling by other systems. The housing is made of Aluminium Brass. The light is CE approved.

Colors   : full spectrum
Voltage   : multivolt (10-31V)

Lumishore Shorelite

The Shorelite was designed to Mount to a wall. This can be a pontoon, in a harbour or at diving docks. The integrated driver unit makes mounting and connecting of the light a breeze. The Shorelite is equipped with high quality Philips LEDs (100lm/Watt). This ensures a strong, bright light beam, which decreases the number of units needed. The life span at correct use is over 50000 hours. The unit is completely sealed. The housing is made of stainless steel 316. The lens has an angle of 90 degrees and is made of toughened borosilicate. Colour change is available, but only on request.

Lens angle   : 90°
